PREFERENCES (located under the Separation Studio 4 Menu MAC, Support Menu Windows):

Note that the ACCEPT button automatically appears when changes are made to Preferences.

Lock in changes by selecting ACCEPT. When no changes have been made to Preferences then only the CLOSE button is visible.

The ? icon launches the solutionsforscreenprinters.com website for additional info.

PREFERENCES

FOCUSED • POWERFUL • EASY-TO-USE

Default Separation View

Change program preview default from INK to FILM. Changes made apply to files opened after change, and NOT to files that are already open.

Undo Limit

Change the amount of undo steps. Default is 10 undos. More levels of undo require more memory.

Press Size

Sets the default press size for the PressFit feature which is a PDF only option.

PDF File Handling / Printing

Default is Optimal. Optimal setting balances file open speed with print quality only for vector PDF spot color files, not Spot Process tonal raster files. Spot Process/sim process files are opened and printed based on the actual file resolution saved in the file.

Note that Max Resolution can significantly slow down printing. Test settings to adjust file opening speed and print quality to tune the software to perform best with your computer configuration.
